

DM Note to File

Project title:	INDiGO trial	Note Number: 02
SCC /LEO Number:	25071	

Subject: Data Override

Details:

During the trial's daily data cleaning by the Data Support Assistant (DSA), Data overrides were discovered and reported to the trial Data Manager for advice. An investigation involving the trial Data Manager and the DSA was carried out. It was discovered that the data collectors involved had failed to perform "REFRESH SETUP & DATA" procedure to obtain the latest data from the server. As a result, new records with the same instance number were overriding the pre-existing records on those instances.

Upon discovering this issue, the trial Data Manager together with the DSA adopted a pragmatic approach, by collecting the project trial logs of mobile devices involved and advice the parties to send app data dump. The data dump, along with the project app log, was used retrieve and processed into a single CSV file. Finally, the data was imported into the project database by the DSA.

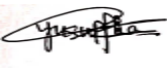

The following Participant IDs were affected:

IN-M-027E – Daily Supplementation

IN-M-018C - Daily Supplementation

IN-M-009K – Daily Supplementation
